Application No.:

09/888,286

Amendment dated:

February 21, 2005

Reply to Office Action of:

September 21, 2004

IN THE SPECIFICATION:

Please amend the specification as indicated. The complete paragraph from the

specification is included below, reflecting added subject matter (underlining) and deleted subject

matter (strikethrough).

During the course of telephonic communication, the processor PR1 formulates

identification data for the caller specifically such as: the date and time of the call, the

chronological sequence of the call, the assigned designation of the call, and a set of

acknowledgment digits for the call. Such data identification is registered in the caller's assigned

cell C1 in accordance with the format of FIGURE 7 [[2]] being stored in sections 62, 64, 67 and

69. Note that the data may be stored in a coded interrelationship. For example, the

acknowledgment digits may be related to the call record sequence. In the illustrative example,

the chronological order number of the caller is 4951. The acknowledge digits may be derived

from the sequence number. For example, as illustrated, a coded relationship may be established

by adding "two" to each of the individual record sequence digits. Considering the example

numerically:

4951

2222

Adding without propagated carries: 6173
